Here are some pictures that show information about the R1b1b2a1a haplogroup:

This one shows how the R haplogroup is related to all the others:

I am in R (R1b1b2a1a) haplogroup, in which are about 78% of Europeans. It is one of the youngest haplogroups. (A is the oldest.)
Here is the R haplogroup further divided:

Follow the green line for the R1b1b2a1a branch. I have ordered tests to further refine this haplogroup.
Here is the migration pattern for the R1b haplogroup.

This shows locations in orange for the R1b haplogroup now:

Haplogroup R1b is the most common haplogroup in European populations. It is believed to have expanded throughout Europe as humans re-colonized after the last glacial maximum 10-12 thousand years ago. Its branch R1b1b2a1a is distributed across Europe.
