

Upgraded Chevrolet Bolt EV and Chevrolet Volt Portable EVSE to 240-Volts

L. David Roper, roperld@vt.edu

EVSE = Electric Vehicle Supply Equipment

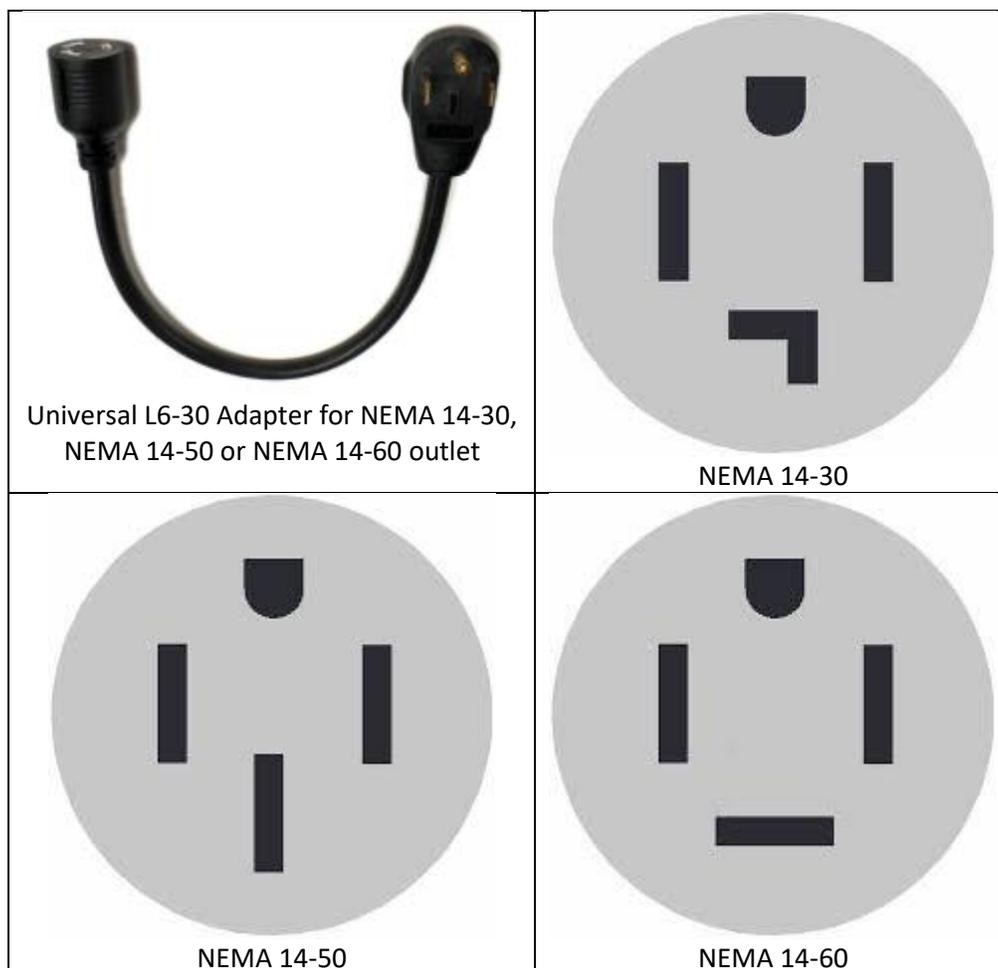

NEMA = National Electrical Manufacturers Association

EVSE Upgrade and Pigtails

One can order from EVSEUpgrade.com [conversion of the portable EVSE that comes with the Chevrolet Bolt EV](#) (CBEV) from 120-volts charging to 240-volts charging. The plug is converted from male NEMA 5-15 (120-volts) to a male NEMA L6-30 (240-volts).

One can order a [pigtail short cord](#) to enable using the converted EVSE to continue being used for slow 120-volts charging. The pigtail has a female NEMA L6-30 Plug, to serve as an outlet for the converted EVSE, to a male NEMA 5-15 plug.

One can order a [pigtail short cord](#) to enable using the converted EVSE for NEMA 14-30 standard dryer outlet, NEMA 14-50 campground outlet and NEMA 14-60 commercial outlet, such as fairgrounds.

One can order a [pigtail short cord](#) to enable using the converted EVSE for NEMA 6-50 welder/garage outlet. Also, some level-2 charging stations use the NEMA 6-50 outlet; so, if the charging station is not working due to a network problem, one may be able to unplug the charging station and use the outlet to charge.

Etsy IdeaFab Upgrade

There is another way to [upgrade the BoltEV/Volt portable EVSE](#):

“Do you have access to a 240V outlet? Dryer outlet? Welder outlet? Large window unit outlet? Even 3-phase outlets? Select your outlet type from the chart provided. No need to modify your EVSE to get Level 2, or spend hundreds on a new Level 2 EVSE. The EVSE provides 12A of charging which means you're getting up to 3kW of Level 2 charge when using an adapter.”
